## skills {

- ▶ **JAVA** (10yrs): se/ee, oop/d/a, hibernate, spring, maven, jboss, tomcat, junit, jmockit, mockito, tdd, IntelliJ, eclipse, soap, REST (jersey, resteasy), webservices, design patterns, apache
- ▶ **WEB** (5yrs): html5, javascript, angular2, npm, typescript, webstorm, php, json, xml, css, sass
- ▶ **DBs** (5yrs): postgresql, mongodb, mysql, mssql, oracle
- ▶ **DEVOPS** (2yrs): docker, jenkins, nexus, maven, ant, automation
- ▶ **OTHER TEK**: python, unix, linux, osx, win, git, jira, confluence, agile, scrum, selenium webdriver, jboss drools, cucumber
- ▶ **NON-TEK**: team building, excellent communication (verbal, written), presentations, other languages Spanish, Portuguese

**},**

## experience {

- ▶ **EXTENSIS [digital asset mgt.] (2011- X)** : I am one of two developers responsible for two server software products that manage fonts and font licenses for small to large design and publishing companies. We have gone from waterfall to scrum and are completely re-writing one of the products. I work very closely with our PO in order to best accommodate our technical desires for the product while considering customer requests and issues. We're now a well oiled machine that is successfully improving almost every aspect of our product. I'm currently upgrading some of our features taking them from SOAP to REST, paving the way for the front end re-write (eliminating Flex using Angular2 + Typescript). After releases I enjoy mentoring some of the Tech Support team members interested in becoming developers.
- ▶ **REVELEX [travel industry] (2006-2009)** : I played an integral part of the Java team responsible for providing all back end communication with various airline booking engines via SOAP. Lead developer in re-writing various legacy components in order to update architecture, minimize our payload and improve performance. Incorporated JBoss Business Rules (drools) in order to avoid having to recompile and re-deploy the server every time our growing list of agencies had a new promotion or sale. This eliminated many phone calls, emails and sped up the process from days to minutes.
- ▶ **Avisena, ProxyMed [health IT] (2002-2006)** : I was part of the medical transactions team working with a large home spun enterprise java engine which handled millions of medical transactions per day (async & sync). I became lead developer of realtime transactions and was eventually promoted to the R&D to help support a new line of business in data.
- ▶ **IBM (2001)** : Before graduating I had the great opportunity to intern 8 months at IBM and be part of the NetVista Thin Client software team in Rochester, MN. I was exposed to great software development processes and allowed to work in various aspects of a Software Release for TCs. including planning, design, dev, QA.

**}**

## ABOUT

I've always been passionate about creative problem solving, ideas and technology. These passions recently grew, thanks to the adoption of newer technologies, concepts and frameworks such as BDD, REST, git, Docker and Angular2. This passion has led me to further sharpen my existing skills and pursue new challenges. I am very excited to work with Docker, Cucumber, Swift, Ruby, Android, Go, Scala and others. In the community I enjoy being a co-organizer for Docker Meetups and mentoring for Latinos & Women Who Code.

## NON-TEK

The rest of my creative energy goes to practicing and performing music. International travel, business development, marketing and world music are other interests.

## EDUCATION

Florida Int'l University 2002  
BS Computer Science

## AWARDS

Portland Startup Weekend Latino 2016 - Customer Validation
